## **DETAILED ACTION**

### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1. the specifics of a display system wherein the special technical feature being the dimming device comprising of a dimming layer and a conversion layer disposed between the display panel and the backlight as shown in Figure 14, which corresponds to a first embodiment;
2. the specifics of a display system wherein the special technical feature being the dimming device comprising a dimming layer and a conversion layer disposed inside the display panel as shown in Figure 15, which corresponds to a second embodiment;
3. the specifics of a display system wherein the special technical feature being the dimming device comprising a dimming layer and a conversion layer disposed between the display panel and the backlight and a color filter layer disposed on a viewer side of the substrate of the display panel as shown in Figure 16, which corresponds to a third embodiment;
4. the specifics of a display system wherein the special technical feature being the dimming device comprising a dimming layer, a conversion layer and a color

filter layer disposed between the display panel and the backlight as shown in Figures 17 and 18, which corresponds to a fourth embodiment;

5. the specifics of a display system wherein the special technical feature being the dimming device comprising a dimming layer and a conversion layer, which is a color filter layer, disposed between the display panel and the backlight as shown in Figure 19, which corresponds to a fifth embodiment.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: at least claims 49-52.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each of the species includes a specific structure of the dimming device, wherein the dimming device being the special technical feature of the invention. The species are configured such that they cannot coexist in one single invention, hence, the species are deemed patentably distinct from one another.
